# IMPORTANT

## Please read all of the instructions before installation

Avoid restrictive piping, fittings or sharp angled bends when plumbing the mixer.

Do not hydrostatic test the installation with this mixer installed. Damage to the ceramic headworks may occur.

All pipe-work must be thoroughly flushed prior to installation of the mixer. In-line filters must be installed on both hot and cold supplies to prevent foreign particles damaging the ceramic headworks.

**NOTE: It is the responsibility of the installer to ensure a water proof seal is achieved between the faceplate and finished surface of the wall. Silicon should be used between the faceplate and the finished wall surface to ensure a seal is achieved.**

### Final fit-off (number 5 & 6)

- A. Trim 1/2" BSP tube to length.  
Max 15mm +/- 2mm protruding from wall lining.
- B. Remove plastic template and fit face plate to wall (use sealant if required).
- C. Fit Inlet Connector and then spout.
- Note: Do not turn spout against face plate to avoid marking.* Tighten with Allen Key.
- D. Assemble half dome and handle.
