Economy Reverse Bath/ Shower Diverter 36-0307

- The operation of the reverse flow diverters is the same as the Economy Diverter except that when the diverter is lifted, the water can rise up in the wall tube and then out of the wall outlet or hand shower. The installation can save the extra set of taps normally required for an in-wall shower installation.
- WELS rating not required
- Installers note: A minimum of 20mm ($\frac{3}{4}$ ") diameter tube is required between the diverter outlet and shower outlet, otherwise water may rise to the shower outlet when the bath alone is being filled
